Happy Birthday, Yellowstone

MENLO PARK, CA - America is about to celebrate the 137th anniversary of “the best idea we ever had” — in the words of Wallace Stegner—the setting aside of unique parcels of land for the benefit and enjoyment of the people, the national park idea.

Yellowstone National Park was established as the world’s first truly national park. It was on **March 1, 1872** that President Ulysses S. Grant signed into law the reservation of Yellowstone National Park. All these years later visitation to Yellowstone now tops three million a year, and the national park idea has been copied by countries around the world.

How are today’s visitors to decide where to go and what to do along Yellowstone Park’s 300+ miles of roads? In the mid-1990s, a lifelong aficionado of the park, Janet Chapple, set out to research and write the quintessential guidebook to answer these questions. April 2009 will see the publication of the updated third edition of her highly popular guide,

Yellowstone Treasures: The Traveler’s Companion to the National Park (\$23.95 trade paperback, www.yellowstonetreasures.com).

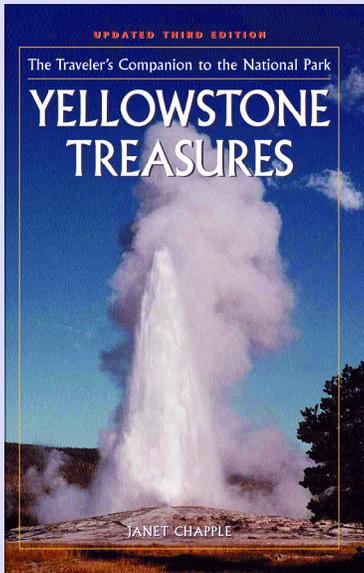

What distinguishes this guidebook from the numerous others one might consider when planning a Yellowstone trip? Most obvious are the facts that this book’s 392 pages are **full-color throughout** and that it is centered around Yellowstone and not around both Yellowstone and neighboring Grand Teton national parks. Thus, the reader of **Yellowstone Treasures** will find:

- Mile-by-mile descriptions of all the features along Yellowstone’s roads
- Descriptions of the areas just outside Yellowstone
- A field guide to the flora and fauna
- Recommended walks in the geyser basins and elsewhere off the roads
- A historical time line plus highlighted historical tidbits throughout
- Charts of campgrounds and other facilities
- Over 200 photos, contemporary and historical
- 37 detailed maps

How did the author put together this “*Best comprehensive Yellowstone travel book ever?*”—as the owner of The Bookworm shop in West Yellowstone, Montana has put it? Lots of research is the simple answer: keeping up over many years—by every print, personal, and internet means available—with the wolves and the grizzlies, the geysers and the rumblings of the super-volcano, the debates over winter visitation and the environmental threats to the park’s environs. “It took over my life,” says Chapple, and, “I plan to keep updating and marketing the book as long as I can or until I’m 80 years old—whichever comes first!”
